

A Yokogawa Company

# SUSTAINABILITY STATEMENT

We believe that the earth is being developed at a rate and in a way which poses a threat to the future. We are worried for the world in which our children will be expected to live and thrive.

Sustainability

Everyone has a role to play in delivering a better future for the next generation; in what we do ourselves and what we expect of others either as individual contributors, leading teams or leading organizations. We believe leaders should be pursuing triple bottom line performance, placing the same amount of importance on people and environment as profits.

Yokogawa has 2050 goals of achieving net-zero emissions, well-being of all and circular economy and is working towards sustainability targets linked to the United Nations Sustainable Development Goals. As a Yokogawa company we're proud to be part of this vision, making the world a better place through our digitalization technologies, practices and people.

We believe in achieving superior results, sustained, in everything we do. Being part of something can't be passive; it requires actions done with excellence. This is because excellence is never an accident. It is always the result of high intention, sincere effort and intelligent execution; it represents the wise choice of many alternatives. Because choice, not chance, determines your destiny.

Therefore, our pledge is to measure and improve in these areas:

- Our resource efficiency
- Our carbon emissions
- The well-being of our people

Through this we believe we will enhance the lives of those around us and the environment we pass on.

Andy Howell CEO
